Notifications are found in Home / Notifications

Overview

This screen provides notifications related to system events (a report has been generated, a bill run has completed, etc.). Notifications are unread (shown in bold) until selected, they will then be marked as read.

Notifications Panel

The Notifications panel on the left of this screen shows all read and unread notifications that have been generated. Selecting a notification on the left will allow you to view notification details on the Edit Notifications panel to the right. Actions are also available in this panel which are shown as icons above the Filter text box. The available actions are described below.

Actions

Icon	Description
	Marks the notification as unread
	Deletes the selected notification

Edit Notification Panel

The information in this panel reflects the currently selected notification. From here you can view notification details (explained below)

Notification Fields:

- **Type:** identifies whether the notification is a Message or a Report.
- **Status:** shows the current notification state, such as Created, Delivered, Read, or Removed.
- **Created Date:** shows when the notification was generated.
- **Detail / Report:** message notifications display a detail message describing the event. Report notifications display the generated report when report content is available.
